Big Picture

What we Have

- mdd
 - control process running on PPC
- mippEvtBuilder
 - Assembles pieces of events into file
- mippRC
 - Run Control GUI
 - Keeps track of all other processes

How it Works

- Detectors are configured through XML files
 - Very simple, yet structured
- Run control sends “RunStart” messages
 - mdd's start their client processes (detectors)
- Run control sends “RunStop” messages
 - mdd's stop client processes
