ICO – “Integrated Contract Order”

Idea is to have the experimental area ready for beam to E907 in January 2002.

Upstream of MC-7 is the responsibility of the Fermilab Beams Division, including the Switch Yard 120 Project.

MC-7 is the current best location for E907

Current Occupant: Hyper-CP (FNAL E871)

Work to be done:

- **Remove, or stage E871 detectors**
- **Remove BM109 magnets**
- **Jolly Green Giant installation plan, refurbishment, assembly and connection**
- **TPL-B identify, move, installation plan, refurbishment, assembly and connection**

Status:

- **ICO draft at Fermilab with contract bid generated and on its way to LLNL**
- **Estimates are less than \$200k (?)**
- **Fermilab overhead (25%) to be re-invested in part in P907**
- **LLNL overhead is 13% “lost” to institution**
- **Possible problem at LLNL is a 10% recession of program funding (but I intend to push ahead)**
